Project Overview

Xcel Energy is constructing the Southeast Metro Natural Gas Project in your community.

This project is part of our commitment to system revitalization and will allow us to continue to provide the safe, reliable natural gas service you expect.

Construction in Your Area

We are replacing the existing natural gas regulator station located near the intersection of Havana Street and Berry Avenue. The replacement regulator station will connect to the new natural gas line currently being installed.

Please note our updated work area in the map above.

During construction, you may notice:

- Crews, materials and equipment.
- Elevated levels of noise.
- Short-term closures to pedestrian access through the area.
- Temporary construction fencing. For your safety and the safety of our crews, please follow posted signs and keep clear of construction areas.

We will test the replacement regulator station following construction. You may notice the following during testing:

- Controlled release of odorized natural gas.
- The sound of natural gas and air venting from the regulator station.
- The smell of the mercaptan odorant in natural gas, which produces a sulfur or "rotten egg" odor, although it may smell differently to you.

Work in Your Neighborhood

- Replacement of existing regulator station.
- Near the intersection of Havana Street and Berry Avenue.
- Majority of activities in January and February. We will return at a later date to complete work at the location.
- Work will occur during allowable daytime hours.
- Contact us with questions (see reverse).

SOUTHEAST METRO NATURAL GAS PROJECT

REGULATOR STATION NEAR HAVANA STREET AND BERRY AVENUE
JANUARY 2021
COLORADO

Construction Schedule

Crews began work at the regulator station in early January 2021. We will complete the majority of activities at the site in January and February. We will return at a later date to complete activities at the regulator station. We will continue to coordinate with you and provide additional details as work progresses.

What Are Regulator Stations?

Regulator stations are an essential component of our natural gas delivery system. They prepare natural gas for final delivery to customers by reducing natural gas pressure between mains and the lines directly serving customers.

Xcel Energy selects regulator station sites with customer safety and natural gas needs in mind. We have a track record of safely operating the regulator stations in our natural gas system, including the existing regulator station near the intersection of Havana Street and Berry Avenue.

Project Safety

Public safety is at the foundation of all we do. The safety of the public around Xcel Energy's natural gas system influences every decision we make. Xcel Energy takes a proactive approach to public safety by implementing safety measures before, during and after construction.

The project has been designed to continue to meet federal and state standards and safety requirements for installing, maintaining and operating natural gas infrastructure.

If you ever suspect a natural gas leak, leave your home or business immediately. Once you are safely away, call **911**, then Xcel Energy at **800-895-2999**.

COVID-19 Safety

This critical infrastructure work will continue during the COVID-19 pandemic. Xcel Energy employees and subcontractors are taking precautions to limit exposure to themselves and others. Xcel Energy is requesting that members of the public not approach workers in the field to maintain social distance.
