## Overview

Xcel Energy plans to replace a regulator station near Hampden Avenue between Akron and Yosemite streets in Denver for the Southeast Metro Natural Gas Project.

Natural gas regulator stations are an essential component of our natural gas delivery system. They serve the function of regulating natural gas pressure to prepare it for delivery to local customers. Replacement is needed to support the new natural gas line currently being installed.

This project is being constructed as part of our commitment to revitalizing our system and will allow us to continue to provide the safe, reliable natural gas service you expect.

## Construction Schedule

**Initial activities will take place through January 2021. Construction will begin in February and continue into the summer. Please note that schedules are subject to change.**

During construction, you may notice:

- Truck traffic to and from the regulator station site.
- Temporary fencing near the regulator station entrance at Akron Street.
- Crews working during allowable hours.
- Elevated levels of noise.
- Natural gas testing procedures, which may include flaring to burn off the controlled release of odorized natural gas. We will notify emergency responders and the public prior to flaring activities.

## Safety Overview

Public safety is at the foundation of all we do. This project has been designed to meet federal and state standards and safety requirements for installing, maintaining and operating natural gas infrastructure.

If you ever suspect a natural gas leak, leave your home or business immediately. Once you are safely away, call **911**, then our gas emergency hotline at **800-895-2999**.

## Xcel Energy COVID-19 Response

This critical infrastructure work will continue during the COVID-19 pandemic. Our employees and subcontractors are taking precautions to limit exposures to themselves and others.
